

RINA NEWHOUSE

rina.newhouse@gmail.com | +1 (408) 201-3075 | Chicago, IL | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Technical generalist with 2+ years in a customer-facing role at a lean, high-velocity organization. Experienced working directly with users to help them get the most value from systems and processes, reading API documentation, debugging integrations, and translating outcomes clearly for non-technical stakeholders. Built and maintained a full suite of SaaS-adjacent tools including CRM pipelines, email automation, and web applications. Self-starter, comfortable with ambiguity, and motivated by making sure the people depending on a system actually get what they need.

TECHNICAL SKILLS

Data & Analytics: SQL ([Certificate](#), LeetCode practice), CSV processing, CRM reporting, engagement metrics, data segmentation, Salesforce HEaRT

Programming: TypeScript, JavaScript, Python, React, Next.js, HTML, CSS

Platforms & Integrations: Constant Contact (incl. API and OAuth2), Vercel, GitHub, Postgres, Firebase, Supabase, EmailJS, Okta, Classy, GoFundMe Pro

Communication & Stakeholder Tools: Stakeholder presentation design, cross-functional coordination, Canva, process documentation

PROFESSIONAL EXPERIENCE

[Johns Hopkins Hillel](#)

[Baltimore, MD | July 2024 - Present](#)

Operations and Engineering Associate (Springboard Fellow)

- Served as the primary technical point of contact for a 400-student community and 7-person staff, fielding requests and translating between technical systems and non-technical users daily across Slack, email, and in person.
- Worked directly with JHU Admissions officers to understand their workflow, identify gaps in outreach tooling, and build an interactive mapping tool (React + Leaflet) with 200+ school markers, dynamic clustering, and multi-field filtering; info session attendance grew from 12 to 83.
- Rebuilt email infrastructure using the Constant Contact API (ESP), eliminating 73% of redundant lists and automating subscriber routing; resolved OAuth2 token failures and Vercel environment variable misconfigurations through a month of back-and-forth with Tier II API support to ship before a hard semester deadline.
- Tracked and analyzed engagement metrics across Salesforce HEaRT (CRM) and Constant Contact, diagnosing deliverability drops in real time and reporting findings to leadership with clear, actionable recommendations. Pitched a newer more efficient CRM model featuring Palantir's AI foundry database.
- Rebuilt the prospective student intake workflow end to end using EmailJS, auto-routing submissions to three staff simultaneously; tour requests went from roughly once a month to multiple per week.
- Compiled and presented semi-annual stakeholder reports to donors, board members, and senior leadership, translating operational data into clear narratives that directly informed funding decisions each cycle.
- Proposed and shipped a React 19 SPA to replace the organization's legacy site; reached 4,000 page views and 2,000 unique visitors within 90 days via Vercel Analytics.

[Skinstric AI](#)

[Remote | August 2025 - September 2025](#)

Frontend Engineer

- Built a production React application integrating an external data API to surface personalized outputs, maintaining documentation for data flows and communicating technical decisions to non-technical stakeholders.

AI & TECHNOLOGY PROJECTS

[Repliable.ai](#): [Live Demo](#) | [GitHub Link](#)

AI-powered workplace communication tool built with Next.js 14 and TypeScript that analyzes messages and generates response suggestions based on behavioral patterns.

- Designed a system to evaluate message ambiguity and produce three response options tailored to power hierarchies and communication context, applying behavioral segmentation logic to personalize outputs.
- Implemented user profile management and message history tracking with pattern analysis using Prisma and Postgres.

[Hillel Event Intelligence Platform \(Palantir Foundry Prototype\)](#): [Live Demo](#)

Analytics platform built on Palantir Foundry with three AIP-powered dashboards that analyze student and event data and generate specific, actionable recommendations for programming, outreach, and budget decisions.

- Events dashboard computed a success score per event across attendance, retention, and first-timer conversion and generated AIP-powered recommendations; student dashboard generated personalized outreach recommendations per student across 700+ members.
- Natural language advisor let directors ask any question about their student population in plain English and returned prioritized at-risk lists and re-engagement recommendations actionable in staff meetings.

EDUCATION

Full Stack Engineering Institute | [Certificate](#)

[July 2024 - August 2025](#)

Degree: Bachelor of Science, University of Illinois Urbana-Champaign, 3.8 GPA

[May 2024](#)
